

```

# /etc/services:
# $Id: services,v 1.48 2009/11/11 14:32:31 ovasik Exp $
#
# Network services, Internet style
# IANA services version: last updated 2009-11-10
#
# Note that it is presently the policy of IANA to assign a single well-known
# port number for both TCP and UDP; hence, most entries here have two entries
# even if the protocol doesn't support UDP operations.
# Updated from RFC 1700, ``Assigned Numbers'' (October 1994). Not all ports
# are included, only the more common ones.
#
# The latest IANA port assignments can be gotten from
#   http://www.iana.org/assignments/port-numbers
# The Well Known Ports are those from 0 through 1023.
# The Registered Ports are those from 1024 through 49151
# The Dynamic and/or Private Ports are those from 49152 through 65535
#
# Each line describes one service, and is of the form:
#
# service-name port/protocol [aliases ...] [# comment]

#
# From ``PORT NUMBERS'':
#
#>REGISTERED PORT NUMBERS
#>
#>The Registered Ports are listed by the IANA and on most systems can be
#>used by ordinary user processes or programs executed by ordinary
#>users.
#>
#>Ports are used in the TCP [RFC793] to name the ends of logical
#>connections which carry long term conversations. For the purpose of
#>providing services to unknown callers, a service contact port is
#>defined. This list specifies the port used by the server process as
#>its contact port.
#>
#>The IANA registers uses of these ports as a convenience to the
#>community.
